

Identify key attributes and related attributes for entities:

Customers: Customer_id, full_name, address, phone, birthday, sale, registration_date

Staff: Staff_id, full_name, day_of_entry, phone

Products: Products_id, product_name, unit, nation, price

Invoice: Invoice_id, purchase_date, customer_id, staff_id, value

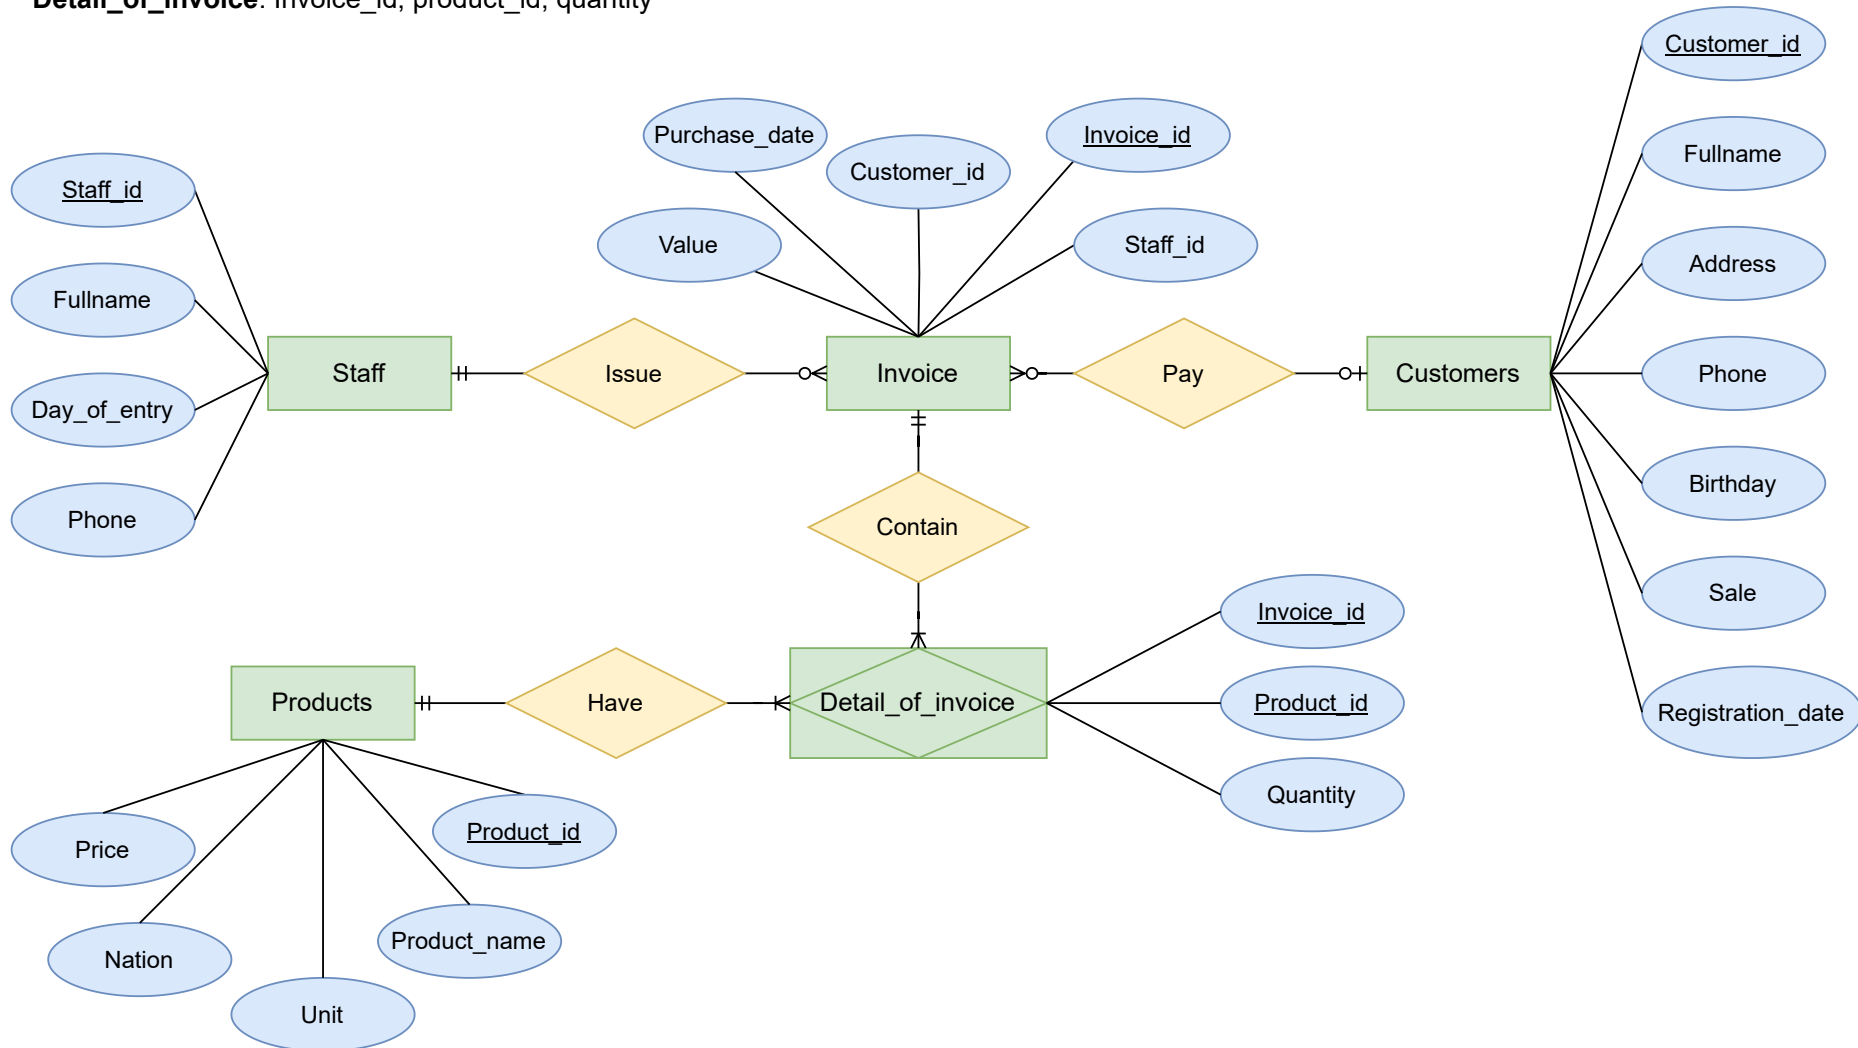

Detail_of_invoice: Invoice_id, product_id, quantity

Identify relation for entities:

Customers - Invoice: one - many (1 : n)

Staff - Invoice: one - many (1 : n)

Products - Invoice: many - many (n : n)

Identify key attributes and related attributes for entities:

Employee: Employee_code, manager code, FullName, gender, address, date of birth, type (full_time/part_time), Department_code, salary

Department: Department_code, location, room_name, start_day_record

Relatives: Employee_code, date_of_birth, name, relationship

Project participation: Employee_code, project_code, working_time

Project: Project_code, project_name, location

Identify relation for entities:

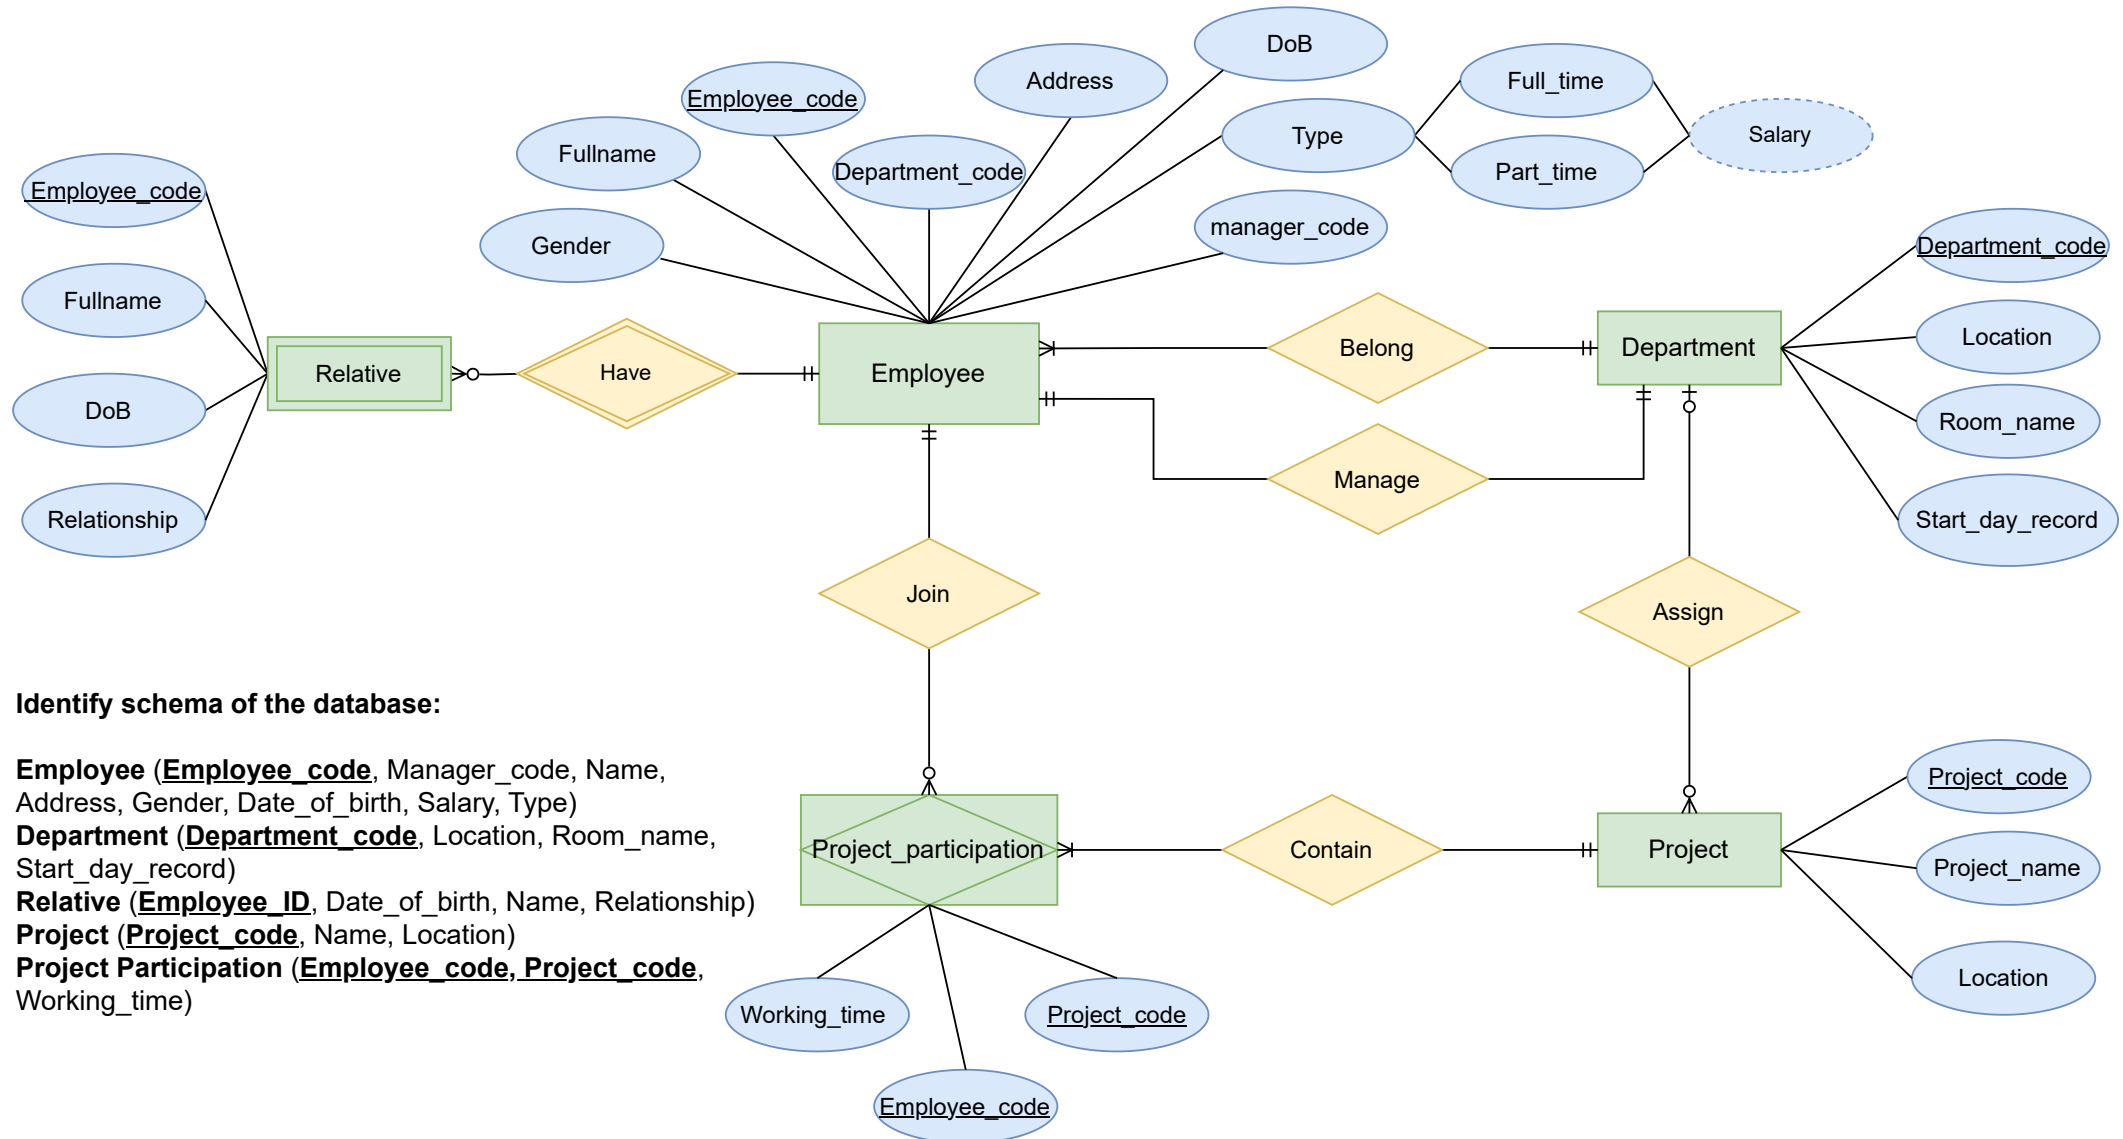

Employee - Department: many - one (n : 1) (belong)

Employee - Department: one - one (1 : 1) (manage)

Employee - Relative: one - many (1 : n)

Department - Project: one - many (1 : n)

Employee - Project: many - many (n : n)

Identify schema of the database:

Employee (Employee_code, Manager_code, Name, Address, Gender, Date_of_birth, Salary, Type)

Department (Department_code, Location, Room_name, Start_day_record)

Relative (Employee_ID, Date_of_birth, Name, Relationship)

Project (Project_code, Name, Location)

Project Participation (Employee_code, Project_code, Working_time)
