

Practice Assignment 4

Instruction:

* Students are allowing to write their answers (like SQL queries, Screen shot of outputs, etc.) in word file (Answer sheet) provided by instructor. After finishing the assignment, students must convert the word file (Answer sheet) into a PDF file. Finally, students upload the file in Moodle.

1. Create the following tables in a new database 'Assignment3':

Clients(**Client Number**, Client_Name, Address, City, Pincode, Province, Amount_Paid, Amount_Due)

Product(**Product Number**, Product_Name, Quantity_On_Hand, Quantity_Sell, Sell_Price, Cost_Price)

Salesman (**Salesman Number**, Salesman _Name, Address, City, Pincode, Province, Salary, Sales_Target, Target_Achieve, Phone)

Salesorder(**Order Number**, Order_Date, **Client Number**, **Salesman Number**, Delivery_Status, Delivery_Date, Order_Status)

Salesorderdetails(**Order Number**, **Product Number**, Order_Quantity)

1. Using Joining table to combine rows from more tables. (INNER JOIN, LEFT JOIN, RIGHT JOIN, CROSS JOIN, SEFT JOIN)

Supported Types of Joins in MySQL

INNER JOIN: Returns records that have matching values in both tables

LEFT JOIN: Returns all records from the left table, and the matched records from the right table

RIGHT JOIN: Returns all records from the right table, and the matched records from the left table

CROSS JOIN: Returns all records from both tables

1. Find the client names and salesman names who are lives in same city.
2. Find each order (client_number, client_name, order_number) placed by each client.

3. Display the details of clients who have placed a number of orders.
4. Display the details of clients who have placed more than 3 orders.
5. Display details of clients who have placed more than 1 order in descending order.
6. Find the salesman names who sells more than 20 products.
7. Display the client information and order number of those clients who have cancelled more than one order.
8. Display client name, client number, order number, salesman number, and product number for each order.
9. Count the number of client orders placed for each product.
10. Find product numbers that were ordered by more than two clients.

b) Using nested query with operator (IN, EXISTS, ANY and ALL)

11. Find the salesman's names who is getting the second highest salary.
12. Find the salesman's names who is getting second lowest salary.
13. Find the name of the salesman who delivered the product to client C108.
14. Write a query to find the name and the salary of the salesman who have a higher salary than the salesman whose salesman number is S001.
15. Write a query to find the name of all salesman who sold the product has number: P1002.
16. Write a query to find the name and number of the salesman who sold pens.
17. Write a query to find the name and salary of the salesman whose salary is greater than the average salary.
18. Write a query to find the name and Amount Paid of the clients whose amount paid is greater than the average amount paid.

II. Additional excersice:

19. Find the product price that was sold to Le Xuan.
20. Determine the product name, client name and amount due that was delivered.
21. Find the salesman's name and their product name which is cancelled.
22. Find product names, prices and delivery status for those products purchased by Nguyen Thanh.
23. Display the product name, sell price, salesperson name, delivery status, and order quantity information for each customer.
24. Find the names, product names, and order dates of all sales staff whose product order status has been successful but the items have not yet been delivered to the client.
25. Find each clients' product which in on the way.
26. Find the name of the salesperson who has delivered the same product to different customers living in the same city.

27. Find the name of the customer who ordered the same item multiple times.
28. Write a query to find the name, number and salary of the salesmen who earn less than the average salary and work in any of Thu Dau Mot city.
29. Write a query to find the name, number and salary of the salesmen who earn a salary that is higher than the salary of all the salesmen who have (Order_status = 'Successful'). Sort the results of the salary of the lowest to highest.
30. Write a query to find the 4th maximum salary on the salesman's table.
31. Write a query to find the 3th minimum salary in the salesman's table.
