1. HTML Table

HTML Table

- Table **represents tabular data**
 - A table consists of one or several rows
 - Each row has one or more columns
- Table is comprised of several **core tags**:
 - **<table></table>**: begin/end table definition
 - **<tr></tr>**: create a table row
 - **<td></td>**: create tabular data (cell)
- Table should **not be used for layout**

Use CSS floats or flex and positioning styles instead

Simple HTML Table

Example

```
<table>
  <tr>
    <td></td>
    <td><a href="lecture1.pptx">Lecture 1</a></td>
  </tr>
  <tr>
    <td></td>
    <td><a href="lecture2.pptx">Lecture 2</a></td>
  </tr>
</table>
```

Data Cell and Header Cell

- Two kinds of cells in HTML table
 - **Data** cell – `<td></td>` – containing the table data
 - **Header** cell – `<th></th>` – used for the column names or some more important cells
- Why two kinds of cells?

Used to **semantically** separate the cells

```
<table>
  <tr>
    <th>Full name</th>
    <th>Mark</th>
  </tr>
  <tr>
    <td>Ivan Ivanov</td>
    <td>Very good 5</td>
  </tr>
</table>
```

Complete HTML Table

Tags, Attributes and Elements

Complete HTML Table

Table rows split into 3 semantic sections: **header**, **body** and **footer**

- **<thead>** denotes table header and contains **<th>** elements, instead of **<td>** elements
- **<tbody>** denotes collection of table rows that contain the very data
- **<tfoot>** denotes table footer but comes **BEFORE** the **<tbody>** tag
- **<colgroup>** and **<col>** define columns (used to set column widths)

Complete HTML Table

Example

```
<table>
  <colgroup>
    <col width="150px" />
    <col width="150px" />
  </colgroup>
  <thead>
    <tr>
      <th>Column 1</th>
      <th>Column 2</th>
    </tr>
  </thead>
  <tfoot>
    <tr>
      <td>Footer 1</td>
      <td>Footer 2</td>
    </tr>
  </tfoot>
  <tbody>
    <tr>
      <td>Cell 1.1</td>
      <td>Cell 1.2</td>
    </tr>
  </tbody>
</table>
```

Complete HTML Table

Example

Although the footer is before the data in the code, it is displayed last

Complete HTML Table

Example

12

Complete HTML Table

- The **<caption>** tag defines a table caption and must be **inserted immediately after the <table>** tag.
- By default, a table caption will be **center-aligned above a table**.
However, the CSS properties **text-align** and **caption-side** can be used to align and place the caption.

Complete HTML Table

Example

```
<table border="1px">
  <caption><b>My savings</b></caption>
  <colgroup>
    <col width="100px" />
    <col width="100px" />
  </colgroup>
  <tr>
    <th>Month</th>
    <th>Savings</th>
  </tr>
  <tr>
    <td>January</td>
    <td>$100</td>
  </tr>
</table>
```

Month	Savings
January	\$100

2. Nested Table

Tables in Tables in Tables in Tables...

Nested Table

Table **cells** (<td>) can contain **nested** tables (tables within tables):

```
<table>
  <tr>
    <td>Contact:</td>

    <td>
      <table>
        <tr>
          <td>First Name</td>
          <td>Last Name</td>
        </tr>
      </table>
    </td>
  </tr>
</table>
```

Nested Table

Table **cells** (<td>) can contain **nested** tables (tables within tables):

```
<table>
  <tr>
    <td>Contact:</td>

    <td>
      <table>
        <tr>
          <td>First Name</td>
          <td>Last Name</td>
        </tr>
      </table>
    </td>
  </tr>
</table>
```

The diagram illustrates a nested table structure using HTML code. The outer table has two rows. The first row contains a single cell with the text "Contact:". The second row contains two cells. The first cell is empty. The second cell contains a nested table. This nested table has one row with two cells: "First Name" and "Last Name". An orange rectangular box highlights the nested table structure, including its opening and closing tags and its content.

3. Complex Table

With Padding, Spacing and Stuff

Cell Spacing and Padding

Cell spacing

Defines the
empty space
between cells

Cell padding

Defines the empty
space around the cell
content

Cell Spacing and Padding

Example

```
<html>
  <head><title>Table Cells</title></head>
  <body>
    <table cellspacing="15" cellpadding="0">
      <tr>
        <td>First</td>
        <td>Second</td>
      </tr>
    </table>
    <br/>
    <table cellspacing="0" cellpadding="10">
      <tr>
        <td>First</td>
        <td>Second</td>
      </tr>
    </table>
  </body>
</html>
```

<i>Title</i>	<i>Title</i>	<i>Title</i>
<i>Data</i>		
	<i>Data</i>	

Row and Column Spans

How to Make a Two-Cells Column or Row?

Column and Row Span

Column and Row Span

Example

```
<table cellpadding="5">
  <tr class="Row1">
    <td>Cell [1, 1]</td>
    <td colspan="2">Cell [2, 1]</td>
  </tr>
  <tr class="Row2">
    <td>Cell [1, 2]</td>
    <td rowspan="2">Cell [2, 2]</td>
    <td>Cell [3, 2]</td>
  </tr>
  <tr class="Row3">
    <td>Cell [1, 2]</td>
    <td>Cell [2, 3]</td>
  </tr>
</table>
```

Column and Row Span

Example

Cell[1,1]	Cell[2,1]	
Cell[1,2]	Cell[2,2]	Cell[3,2]
Cell[1,3]		Cell[2,3]

Summary

Exercise

Write the HTML code (tags) for the following table
